

Press Release

DECT telephones for Voice-over-IP

Dortmund, Germany and Horsens, Denmark, 10.09.2004 - Leading IP-PBX vendor Swyx Solutions and KIRK telecom A/S, a global market leader of wireless on-site communication solutions, have announced a partnership to supply businesses with a full-scale, multi-faceted wireless IP telephony solution. The joint solution consists of the KIRK System 600 IP and SwyxWare from Swyx Solutions. A solution which both parties will promote through their respective sales channels.

The aim of integrating SwyxWare and the KIRK System 600 IP is for the two companies to be able to provide businesses with a simple and affordable way of increasing productivity, improving work processes and realizing cost savings, by allowing for employees to remain mobile and flexible with wireless telephones. For multi-site businesses the advantages go even further as the solution allows for a KIRK handset to be subscribed to more KIRK systems, and the handset will automatically log on to the relevant system, when inside the coverage area.

By employing IP telephony and using the same infrastructure for voice as well as data transmission, businesses experience a simpler and more efficient administration of their telephone solutions. Internal calls are free and employees can be reached at all times, regardless of their physical location within the premises.

SwyxWare handles all incoming and outgoing calls over the data network. The software-based IP-PBX, based on the Microsoft® Windows® Server platform, takes over all features of traditional PBXs and additionally enables the users to carry out far more functions which facilitate their working conditions. With the KIRK System 600 IP, up to 12 KIRK handsets can be registered and with 6 simultaneous speech channels there is enough capacity for wireless voice users at all times. As the handsets are based on Digital Enhanced Cordless Telecommunications (DECT) technology, the user is guaranteed unique voice quality, calls which cannot be hacked and seamless handover between base stations.

"By partnering with KIRK telecom, we are able to provide our customers with a full IP solution and meeting all of their telephony needs. This represents a very advantageous offer for our customers and will allow them to improve efficiency as well as service, while even realizing cost savings," says Ralf Ebbinghaus, Managing Director of Swyx Solutions.

"We are happy to be joining forces with Swyx Solutions and see SwyxWare as a great addition to the KIRK System 600 IP. The Swyx partnership is another step of fulfilling our goal of entering the IT segment with our wireless solutions," Mikael Andersen, Sales manager, KIRK telecom adds.

About KIRK telecom A/S

KIRK telecom is a leading global player on the market for wireless on-site communication solutions based on license free radio standards. Products are sold under the KIRK brand as well as incorporated into OEM solutions. The company history in voice communication dates back more than 110 years. Based on the vision "Creating wireless communities", KIRK telecom has for the past 10 years focused on developing core competency in wireless voice communication. About Swyx

Swyx develops and markets an intelligent IP-based telephony software solution. Swyx was founded in 1999 and is headquartered in Dortmund, Germany. The company's stated goal is to complement or completely replace traditional PBXs with a software based IP telephony solution. Swyx's telephony solution SwyxWare consists of four components: SwyxServer, SwyxGate, SwyxIt! and SwyxPhone. SwyxWare offers all features - such as voicemail, Least Cost Routing and extensive journal functions - previously available only through large and expensive PBXs. Additional features such as Call Routing Manager, personalised user interface (skin) and CTI go far beyond the call handling capabilities of traditional PBXs. Swyx products are marketed solely through a network of authorised dealers. The Swyx partnership concept currently embraces more than 500 companies at home and abroad.
