

## Press release

### Swyx announces Vista and Outlook 2007 support

Reading, 20.03.2007 - Swyx a market-leading vendor of IP telephony solutions has announced today that the next release of its Swyxware 'pure' IP telephony software will now support the new **Microsoft Vista** operating system as well as the latest version of **Outlook** (2007).

CEO at Swyx, Guenter Junk CEO at Swyx, Guenter Junk comments, "The new release means that new and existing users can now benefit from the additional functionality associated with Vista and Outlook respectively. It is important for our customers to know that they have peace of mind that their communications system will not become redundant as they upgrade to new platforms such as Vista. The beauty of Swyx is that because it is software-based users simply download the latest version of the software and there is no need to replace or add hardware."

Karl Noakes, Director Partner Development and Marketing at Microsoft said: "As a Microsoft Gold Certified Partner, Swyx is amongst the elite of the Microsoft partner community. Our Gold partners are highly equipped to deliver business-driven technology solutions to their customers and are highly valued by Microsoft."

The new version of Swyxware is currently in market testing and will be generally available in second calendar quarter of 2007.
